

ASSIGNMENT 2

● SESSION 18

1. Write an end-to-end test scenario for booking a movie ticket on BookMyShow, starting from searching for a movie to completing the payment and receiving a booking confirmation.

ANS.

End-to-End Test Scenario – BookMyShow Movie Ticket Booking

STEP	ACTION	EXPECTED RESULT
1.	Launch the BookMyShow app/website	Application opens successfully.
2.	Log in with valid credentials	User is logged in successfully.
3.	Search for a movie.	Matching movie results are displayed
4.	Select the desired movie.	Movie details and available show timings are displayed.
5.	Choose a theatre, date, and show time	Available seats are displayed.
6.	Select seats.	Selected seats are reserved temporarily.
7.	Proceed to checkout.	Booking summary is displayed correctly.
8.	Select a payment method and complete payment	Payment is processed successfully
9.	Verify booking confirmation	Booking ID and ticket details are displayed.

Expected Result:- The ticket is booked successfully, payment is completed, and the booking confirmation is received

2. Create a detailed system integration test scenario for placing a food order on Zomato, covering steps from selecting a restaurant and adding items to cart, to payment and order tracking.

Ans.

<u>Step</u>	<u>Integration</u>	<u>Expected Result</u>
1	User logs in	User is authenticated successfully.
2	Select a restaurant	Restaurant details and menu are loaded correctly.
3	Add food items to cart	Selected items are added to the cart successfully.
4	Verify cart total	Total amount, taxes, and delivery charges are calculated.
5	Apply coupon	Eligible discount is applied correctly.
6	Place order	Order is created successfully.
7	Complete payment	Payment is processed successfully.
8	Hotel receives order.	Restaurant receives the order instantly.
9	Delivery assigned	Delivery executive is assigned successfully.
10	Track the order	Real-time order status is displayed accurately.

3. Write an end-to-end workflow test for a Flipkart-style shopping journey: user logs in, searches for a product, adds it to the cart, applies a discount coupon, selects an address, and completes the purchase.Include both positive and one negative scenario.

Ans.

positive scenarios :-

Objective :- Verify that a user can successfully complete a purchase.

Step	Action	Expected Result
1	Log in with valid credentials.	Login is successful.
2	Search for a product	Relevant products are displayed.
3	Select a product.	Product details page opens.

4	Add the product to the cart.	Product is added successfully.
5	Apply a valid discount coupon.	Discount is applied successfully.
6	Select the delivery address.	Address is selected correctly.
7	Choose a payment method and complete payment.	Payment is successful.
8	Verify order confirmation.	Order ID and confirmation message are displayed.

Expected Result :- The order is placed successfully with the correct discount applied.

Negative Scenario :- Invalid Coupon

<u>Step</u>	<u>Action</u>	<u>Expected Result</u>
1	Add a product to the cart.	Product is added successfully.
2	Apply an invalid or expired coupon.	Error message is displayed
3	Proceed without the coupon.	Purchase can still be completed at the original price.

4.List all the system integrations involved in a Paytm mobile recharge flow (user login, plan selection, payment, SMS confirmation), and write one test case for each integration point.

ANS.

System Integrations in a Paytm Mobile Recharge Flow

Integration Point**Test Case**

Authentication Service.

Verify that a registered user can log in successfully with valid credentials.

Mobile Operator API

Verify that the correct recharge plans are fetched after entering the mobile number.

Recharge Plan Service
