

ASSIGNMENT 2

● SESSION 19

1. Download a sample Terms & Conditions document from any popular app (like Zomato, Flipkart, or Instagram), and perform a static review to identify at least 5 unclear or ambiguous statements that could confuse users.

Ans.

Static Review of a Sample Terms & Conditions Document (Example: Instagram)

The following are examples of statements that could be unclear or ambiguous to users during a static review.

1. Statement

"We may remove content that violates our policies."

Why It May Be Unclear :- It does not clearly explain what types of violations will result in removal.

Suggested Improvement :- Include examples or link directly to specific policy sections.

2. Statement

"We may suspend or terminate your account."

Why It May Be Unclear:- The conditions for suspension or termination are not clearly defined.

Suggested Improvement :- List common reasons for account suspension.

3.Statement

"We may update these Terms at any time."

Why It May Be Unclear :- use are not informed how they will be notified about important changes.

Suggested Improvement :- Specify the notification method and effective date.

4.Statement

"Certain features may not be available in all regions."

Why It May Be Unclear :- It does not identify which features or regions are affected.

Suggested Improvement :- Provide examples or maintain a region-specific feature list.

5.statement

"We use your information to improve our services."

Why It May Be Unclear :-The phrase "improve our services" is broad and may be interpreted differently by users

Suggested Improvement. :- Explain what data is used and for which specific improvements.

2. Create a comparison table listing 3 key differences between static testing and dynamic testing, using real-life examples from apps you use daily (such as a privacy policy review vs. actually filling a signup form).

Ans.

STATIC TESTING	DYNAMIC TESTING
Performed without executing the application.	Performed by executing the application.
Detects defects in documents, requirements, or source code	Detects defects while the software is running.
Example: Reviewing the privacy policy of Instagram for unclear statements	Example: Filling out Instagram's signup form to verify it works correctly.

3. Imagine you are part of a code walkthrough for a new feature in a food delivery app (like Swiggy) — write 5 questions or points you would raise while reviewing the code for the 'Apply Coupon' function.

Ans.

Code Walkthrough Questions – Swiggy "Apply Coupon" Feature

During the code walkthrough, I would raise the following questions:

1. How is coupon validity checked?
2. Is the expiry date validated correctly?
3. How is the minimum order amount verified?
4. Does the code prevent applying coupons below the required order value?
5. How are invalid or expired coupons handled?

4. Conduct a mock inspection of a sample bug report from any open-source project (find one on GitHub or use a template online), and list 3 improvements you would suggest to make the report clearer and more useful for developers. Look for missing steps, unclear expected results, or vague descriptions.

ANS.

Title: Login button not working

Description: The login button does nothing.

Suggested Improvements

Add detailed reproduction steps	Result :- Developers need exact steps to reproduce the issue consistently.
Include expected and actual results	Result :- Clearly describes what

	should happen versus what actually happens.
--	---

Example of a Better Bug Report

Title: Login button becomes unresponsive after entering valid credentials on Chrome v126.

Steps to Reproduce:

- Open the application.
- Enter valid username and password.
- Click Login.

Expected Result :- User should be logged in and redirected to the dashboard.

Actual Result :- The login button remains unresponsive and the user stays on the login page.

Environment :- Windows 11, Chrome v126, App Version 3.2.1.
