

ASSIGNMENT 2

- **Session 21**

1.Create a sample Sprint Board in JIRA using the Scrum template and add at least 5 tasks for a 'Food Delivery App' sprint (e.g., menu display, order placement, payment integration, delivery tracking, user reviews).

Ans.

Project: Food Delivery App

Sprint: Sprint 1 (2 Weeks)

Issue ID	Task	Assignee	Priority	Status
FD-101	Design and implement. Menu.	UI Developer	Display screen	High
FD-102	Implement Order. Placement.	Backend Developer		High
FD-103	Integrate Online Payment Gateway	Backend Developer		High
FD-104	Develop Delivery Tracking feature	Full Stack Developer		Medium
FD-105	Implement User Reviews and Ratings	Frontend Developer		Medium

2. Write a script for a Daily Standup meeting for a team building a new feature in a music streaming app like Spotify, covering what you did yesterday, what you plan to do today, and any blockers.

Ans.

Scrum Master :- Good morning, everyone. Let's begin today's standup.

Developer 1 (Frontend)

Yesterday:

Completed the playlist UI for the new "Recommended Songs" feature.

Fixed responsiveness issues.

Today:

Connect the UI with backend APIs.

Test playlist loading performance.

Blockers:

Waiting for the recommendation API to be finalized

Developer 2 (Backend)

Yesterday:

Developed the recommendation API.

Improved database query performance.

Today:

Complete API documentation.

Deploy API to the testing environment.

Blockers:

None.

QA Engineer

3. Simulate a Sprint Planning meeting by listing 3 user stories for a Flipkart-style shopping cart feature and breaking each story into

smaller tasks with clear acceptance criteria. Think about tasks like 'Add to Cart', 'Update Quantity', and 'Remove Item'.

ANS.

User Story 1

Story:

As a customer, I want to add products to my shopping cart so that I can purchase them later.

Tasks

Create Add to Cart button

Store selected product in cart database

Display cart item count

Handle duplicate products

Acceptance Criteria

User can add products successfully.

Cart count updates immediately.

Added products remain after page refresh.

User Story 2

Story:

As a customer, I want to update the quantity of products in my cart.

Tasks

Add "+" and "-" quantity buttons

Update database quantity

Recalculate total price

Validate minimum quantity

Acceptance Criteria

Quantity updates correctly.

Total amount refreshes automatically.

Quantity cannot be less than one.

User Story 3

Story:

As a customer, I want to remove unwanted products from my cart.

Tasks

Create Remove button

Delete product from cart

Update total amount

Show empty cart message if needed

Acceptance Criteria

Product is removed successfully.

4. After completing a mock sprint for a movie ticket booking app (like BookMyShow), write a brief Sprint Review summary describing what features were delivered, what went well, and what feedback you received from stakeholders.

ANS.

Sprint Review

- Features Delivered
- Movie listing page
- Seat selection
- Ticket booking confirmation
- Online payment integration
- Booking history page

What Went Well

- All planned user stories were completed within the sprint.

- Payment integration worked successfully without major issues.
- Team collaboration between developers and QA was effective.

Stakeholder Feedback

- Add movie trailers on the movie details page.
- Improve seat selection speed on mobile devices.
- Include coupon code support during checkout.
- Enhance booking confirmation UI.

5. Conduct a Sprint Retrospective for a Zomato-style restaurant search sprint by listing 2 things that went well, 2 things that could be improved, and 1 action item for the next sprint.

ANS.

What Went Well

1. Restaurant search results loaded quickly.
2. Team communication and daily standups were effective.

What Could Be Improved

1. API integration took longer than expected.
2. UI testing started too late in the sprint.

Action Item for Next Sprint

1. Begin integration testing earlier and schedule UI testing in parallel with development to identify issues sooner.
