

ASSIGNMENT 2

● SESSION 24

1.Fill out a defect report in Jira for a bug you found in any app you use daily (like Zomato, Flipkart, or Paytm), using all main fields: Summary, Description, Steps to Reproduce, Expected Result, Actual Result, Severity, and Priority.

ANS.

Jira Defect Report :-

Summary :-

Paytm - Mobile recharge history is not updated immediately after successful payment

Description :-

After completing a successful mobile recharge, the recharge is completed successfully, but the transaction does not immediately appear in the Recharge History section. It appears only after refreshing or reopening the application.

Steps to Reproduce :-

1. Open the Paytm app.
2. Log in.
3. Recharge a valid mobile number.
4. Complete payment successfully.
5. Open **Recharge History**.

Expected Result :-

The latest recharge transaction should appear immediately in the Recharge History.

Actual Result :-

The latest recharge is missing until the app is refreshed or reopened.

Severity : Medium

Priority : High

2. Given these three bugs found in a movie ticket booking app: (1) Payment fails for UPI, (2) Movie poster image is blurry, (3) App crashes if you book more than 10 tickets at once — classify each bug as High/Medium/Low Severity and High/Medium/Low Priority, and justify your choices.

ANS.

Bug Severity and Priority Classification :-

Bug	Severity	Priority	Justification
Payment fails for UPI	High	High	Users cannot complete ticket purchases, directly affecting business and revenue.
Movie poster image is blurry	Low	Low	The issue is cosmetic and does not affect booking functionality.
App crashes when booking more than 10 tickets	High	Medium	The application crashes, causing a poor user experience, but only for an uncommon scenario if the app normally limits ticket quantities.

3. Draw the complete bug life cycle for a typical defect in Jira, labeling each stage (for example: New, Assigned, In Progress, Fixed, Retest, Closed, Reopened) and describing what happens at each step.

Ans.

Bug Life Cycle :-

New → assigned → inprogress → fixed → retest → closed

Description of Each Stage :-

Stage	Description
New	Tester reports a new defect in Jira.
Assigned	The defect is assigned to a developer.
In Progress	The developer investigates and works on fixing the issue.
Fixed	The developer completes the fix and updates the issue status.
Retest	QA verifies whether the fix resolves the defect.
Closed	The defect is fixed successfully and no longer exists.

Stage	Description
Reopened	If QA still finds the issue, the defect is reopened and reassigned for another fix.

4. Download a sample defect template from the internet (or use a template provided in class), and fill it out for a bug you noticed in any social media app (like Instagram or WhatsApp), making sure to include Severity and Priority fields.

Ans.

Defect Template :-

Defect ID

BUG-101

Title

Instagram feed does not refresh after pulling down immediately after login.

Module

Home Feed

Environment

- Android 14
- Instagram Latest Version
- Wi-Fi Connection

Description

After logging in, pulling down to refresh the feed sometimes does not load new posts until the application is restarted.

Preconditions

- User account is active.
- Internet connection is available.
- User has successfully logged in.

Steps to Reproduce

1. Open Instagram.
2. Log in.
3. Navigate to the Home Feed.

Expected Result

The latest posts should load immediately.

Actual Result

The feed remains unchanged and no refresh occurs.

Severity - Medium

Priority - Medium

Status

New

Reported By

QA Tester

Assigned To

Developer

Attachments
