

ASSIGNMENT 2

• SESSION 27

1. Pick any one app you use daily (like Zomato, Instagram, or Paytm) and write a short summary of its main features and what you think the business requirements are for that app.

Ans.

App Summary – Zomato :-

App Overview

Zomato is a food delivery and restaurant discovery application. It allows users to search restaurants, browse menus, place food orders, make online payments, and track deliveries in real time.

Main Features

- User Registration and Login
- Restaurant Search
- Filter and Sort Restaurants
- Menu Browsing
- Add Items to Cart
- Online Payment
- Order Tracking
- Ratings and Reviews

Business Requirements

1. Users should be able to register and log in securely.
2. Users should search restaurants by name, cuisine, or location.
3. Users should add food items to the cart.
4. Users should complete payments using different payment methods.
5. Users should receive order confirmation after successful payment.
6. Users should track their orders in real time.

2. For the app you chose, create a test plan document that lists the testing objectives, scope, resources needed, and a rough timeline for manual testing.

Ans.

Test Plan Document :-

Project Name

Zomato Manual Testing

Testing Objectives

- Verify that the food ordering process works correctly.
- Ensure users can successfully log in, search restaurants, and complete payments.
- Identify functional defects before release.

Scope

In Scope

- Login
- Restaurant Search
- Place Food Order

Out of Scope

- Delivery Partner App
- Admin Portal
- Performance Testing
- Security Testing

Testing Type

- Manual Functional Testing
- UI Testing
- Regression Testing

Test Environment

- Android Mobile
- Stable Internet Connection
- Latest Zomato App Version

Resources Needed

- 1 Manual Tester
- Android Phone
- Test Account
- Internet Connection

Test Deliverables

- Test Plan
- Test Cases
- Bug Reports
- Final Test Report

Timeline

Activity	Duration
Requirement Analysis	1 Day
Test Case Design	2 Days
Test Execution	3 Days
Bug Reporting	1 Day
Final Report	1 Day

3. Write 5 test scenarios and 8 detailed test cases (with steps, expected results, and test data) for a core feature of your selected app, such as placing a food order, sending a message, or making a payment.

Ans.

Test Scenarios and Test Cases :-

Feature: Place Food Order

Test Scenarios

1. Verify user can add food to cart.
2. Verify quantity can be updated.
3. Verify order can be placed successfully.
4. Verify payment process.
5. Verify order confirmation message.

Detailed Test Cases

TC ID	Test Case	Test Data	Steps	Expected Result
TC01	Add item to cart	Burger	Open app → Search restaurant → Select Burger → Add to Cart	Item added successfully
TC02	Increase quantity	Burger	Add Burger → Click "+"	Quantity becomes 2
TC03	Remove item from cart	Burger	Add Burger → Remove Item	Cart becomes empty
TC04	Place order using UPI	UPI ID	Add item → Checkout → Pay	Order placed successfully
TC05	Place order using Credit Card	Test Card	Add item → Checkout → Card Payment	Payment successful
TC06	Verify empty cart checkout	Empty Cart	Open cart → Checkout	Error message displayed
TC07	Verify order confirmation	Valid Order	Complete payment	Order confirmation screen appears
TC08	Verify restaurant search	Pizza	Search Pizza	Relevant restaurants displayed

4.Create a simple Requirement Traceability Matrix (RTM) mapping at least 3 requirements from your app to the test cases you wrote.

Ans.

Requirement Traceability Matrix (RTM) :-

Requirement ID	Requirement Description	Test Case IDs
RQ01	User should search restaurants	TC08
RQ02	User should add food to cart	TC01, TC02, TC03
RQ03	User should place order successfully	TC04, TC05, TC07

5. Imagine you executed your test cases and found 2 bugs. Write defect reports for both, including steps to reproduce, expected vs actual results, and severity. Then, prepare a brief final test report summarizing your testing process and results.

Ans.

Defect Reports and Final Test Report :-

Defect Report 1

Bug ID: BUG-001

Title: Payment succeeds but order confirmation is not displayed

Module: Payment

Severity: High

Priority: High

Steps to Reproduce

1. Login to Zomato.
2. Add food item to cart.
3. Proceed to checkout.
4. Complete payment using UPI.

Expected Result

Order confirmation page should appear.

Actual Result

Payment is successful but app remains on loading screen.

Status: Open

Defect Report 2

Bug ID: BUG-002

Title: Restaurant search returns no results for valid restaurant name

Module: Search

Severity: Medium

Priority: Medium

Steps to Reproduce

1. Open Zomato.
2. Enter a valid restaurant name.
3. Tap Search.

Expected Result

Matching restaurant should be displayed.

Actual Result

"No Results Found" message appears despite the restaurant being available.

Status: Open

Final Test Report

Project

Zomato Manual Testing

Testing Summary

Item	Count
Total Test Cases	8
Executed	8
Passed	6
Failed	2
Blocked	0

Defects Summary

Severity	Count
High	1
Medium	1
Low	0

Conclusion

Manual testing was conducted on the Login, Search, and Food Ordering features of the Zomato application. Out of **8 test cases**, **6 passed** and **2 failed** due to identified

defects. The application is largely functional, but the reported issues should be resolved and regression testing should be performed before release.
