

assignment 2

- **SESSION 5**

1. List the 7 main phases of the Software Testing Life Cycle (STLC) and write one line describing what happens in each phase for a Login feature like the one in Instagram or Paytm.

Ans.

STLC Phase Description (Instagram/Paytm Login Example) :-

1. Requirement Analysis :- Study the login requirements such as login with mobile number, email, password, or OTP.

2. Test Planning :- Prepare the testing strategy, resources, schedule, and tools required for testing the login feature.

3. Test Case Development (Design) :- Create test cases and test data for valid login, invalid login, OTP verification, and password validation.

4. Test Environment Setup (Implementation) :- Configure the testing environment, application build, devices, browsers, and test accounts.

5. Test Execution :- Execute all login test cases and record the actual results while reporting any defects found.

6. Defect Reporting & Tracking (Reporting) :- Log defects, track their status, and verify fixes after developers resolve the issues.

7. Test Closure :- Prepare the final test report, evaluate testing results, and document lessons learned before project completion.

2. For a Flipkart-style Login module, create a table that lists the entry and exit criteria for each STLC phase (Planning, Monitoring, Analysis, Design, Implementation, Execution, Reporting, Closure).

Ans:-

STLC Phase	Entry criteria	Exit criteria
Planning	Login requirements are approved	Test plan is reviewed and approved.
Monitoring	Testing activities have started	Progress is tracked and issues are updated regularly.
Analysis	Business requirements are available	Testable requirements are identified.
Design	Requirements are finalized.	Test cases, test data, and RTM are completed and reviewed.
Implementation	Test cases are approved.	Test environment is ready and test scripts are prepared.
Execution	Application build and environment are available	Test cases are executed, defects are logged, and retesting is completed.

Reporting	Test execution is completed	Test reports and defect summaries are shared with stakeholders.
Closure	All planned testing activities are finished	Test closure report is approved and project testing is officially closed.

3. Write a sample Test Plan section (max 1 page) for the Login module of a Zomato-like app, including objectives, scope, resources, and schedule. Focus on what will be tested, who will test, and the timeline for testing the Login feature.

Ans.

Sample Test Plan : Zomato Login Module

Test Plan: Z-LOGIN-001

1. Objective

The objective is to verify that the Zomato login module works correctly for all valid and invalid user scenarios, including email/phone login, OTP verification, and error handling.

2. Scope

In Scope:

- ❖ Login using phone number and OTP
- ❖ Login using email and password
- ❖ Invalid login attempts
- ❖ Forgot password flow
- ❖ Session validation after login

Out of Scope:

- ❖ Payment module

- ❖ Restaurant browsing features
- ❖ Order placement functionality

3. Resources

- 2 Testers
- 1 Test Lead
- Android and iOS devices
- Test environment with staging backend
- Test accounts (valid and invalid users)
- Bug tracking tool (Jira or similar)

4. Schedule

Activity	Duration
• Test Case Design	2 Days
• Environment Setup	1 Day
• Test Execution	3 Days
• Bug Fix Retesting	2 Days
• Test Closure Report	1 Day

Total Duration: 9 Days

4. Design 3 test cases for the Login module of a BookMyShow-style app, covering positive, negative, and boundary scenarios. Include test steps, expected results, and actual results columns.

Ans.

Test ID.	Scenario	Test steps	Expected result	Actual result
TC_01	Positive – Valid Login	Open app → Enter registered	User is successfully logged in	Pass

		mobile number → Enter valid OTP → Click Login	and redirected to the home page.	
TC_02	Negative – Invalid OTP	Open app → Enter registered mobile number → Enter incorrect OTP → Click Login	Invalid OTP error message is displayed and login is not allowed.	Fail: The app accepted the incorrect OTP and allowed the user to log in. Defect logged
TC_03	Boundary – Empty Mobile Number	Open app → Leave mobile number field empty → Click Continue	Validation message such as "Mobile number is required" is displayed.	Pass

5. After executing your test cases, write a short Test Summary Report for the Login module, mentioning how many tests passed, failed, and any major issues found. Imagine you are sending this summary to your team lead after finishing Login testing.

Ans :

Test Summary Report (Login Module – BookMyShow)

Summary

Testing of the Login module has been completed successfully.

Test Execution Results

Total Test Cases Executed: 3

Passed: 2

Failed: 1

Blocked: 0

Major Issues Found

OTP validation delay observed in some cases causing login failure.

Incorrect error message displayed for expired OTP (low severity).

Conclusion

The Login module is mostly stable, but OTP-related issues need to be fixed before release. A retest is recommended after fixes are applied.
