

ASSIGNMENT 2

● SESSION 6

1. Write a unit test scenario for the 'Add to Cart' function in a shopping app like Flipkart, focusing on what should be tested at the smallest code level (e.g., adding an item updates the cart count).

Ans.

Unit Testing Scenario – Add to Cart (Shopping App)

Feature: Add to Cart

Scenario: Verify that adding a product updates the cart count.

Test Steps:

1. Create an empty cart.
2. Call the addToCart(product) function with one product.
3. Check the cart item count.

Expected Result:

- The cart count increases from 0 to 1.
- The selected product is present in the cart.

Focus: Testing only the addToCart() function in isolation without involving the UI or database.

2. Describe an integration testing scenario for a payment flow in a food delivery app like Zomato, where you need to test the interaction between the order placement module and the payment gateway.

Ans.

Integration Testing Scenario :- Payment Flow (Food Delivery App)

Feature :- Order Placement with Payment

Scenario :- Verify that the order placement module correctly interacts with the payment gateway.

Test Steps :-

1. Add food items to the cart.
2. Proceed to checkout.
3. Select an online payment method.
4. Complete a successful payment through the payment gateway.

Expected Result :-

- Payment is processed successfully.
- The payment gateway returns a success response.
- The order placement module creates the order.
- The user receives an order confirmation.

Focus :- Testing the interaction between the order service and the payment gateway

3. Write a system testing scenario for the ticket booking process in an app like BookMyShow, covering the entire end-to-end flow from searching for a movie to receiving a booking confirmation.

Ans.

System Testing Scenario :- Ticket Booking (BookMyShow)

Feature :- Movie Ticket Booking

Scenario :- Verify the complete ticket booking process from start to finish.

Test Steps :-

1. Open the app.
2. Search for a movie.
3. Select a theater and show time.
4. Choose available seats.
5. Proceed to payment.
6. Complete payment successfully.

7. Receive booking confirmation.

Expected Result :-

- Movie search works correctly.
- Seats are reserved after successful payment.
- Booking confirmation is displayed.
- Ticket details are available in the booking history.
- Confirmation SMS/email/push notification is sent (if applicable).

Focus :- Testing the complete application as an integrated system.

4.Create an acceptance testing (UAT/SAT) scenario for a new playlist feature in a music app like Spotify, focusing on how a real user would verify that the feature meets their needs.

Ans.

Acceptance Testing (UAT/SAT) Scenario :- Playlist Feature (Music App)

Feature: Create and Manage Playlists

Scenario :- Verify that users can create and use playlists according to their expectations.

Test Steps :-

1. Log in to the app.
2. Create a new playlist.
3. Add multiple songs.
4. Rename the playlist.
5. Remove one song.
6. Play the playlist.
7. Close and reopen the app.

Expected Result :-

- Playlist is created successfully.
- Songs are added and removed correctly.

- Playlist name is updated.
- Playlist plays without issues.
- All changes are saved after reopening the app.

Focus :- Ensuring the feature meets real user needs and business

5. Write a scenario for either alpha or beta testing for a new group chat feature in a messaging app like WhatsApp, specifying who would perform the test and what feedback is expected. Think about internal employees vs. real users and the types of issues they might report.

Ans :

Beta Testing Scenario :- Group Chat Feature (Messaging App)

Feature :- Group Chat

Who Performs the Test :-

A selected group of real users before the public release.

Scenario :-

Users create group chats, send messages, share media, and make group calls during normal daily use.

Expected Feedback :-

- Ease of creating and managing groups.
- Message delivery speed and reliability.
- Notification behavior.
- Bugs such as crashes, missing messages, or media upload failures.
- Suggestions for improving usability, performance, or additional features.

Focus :- Collecting real-world feedback and identifying issues that may not appear during internal testing before the feature is released to all users.
