

ASSIGNMENT 2

● SESSION 7

1. Pick any one app you use daily (like Zomato, Instagram, or Paytm) and write a detailed test plan for its login feature, including at least these components: objective, scope, test items, features to be tested, features not to be tested, test deliverables, schedule, and responsible roles.

Ans.

Detailed Test Plan :- Login Feature (Instagram)

Test Plan

Objective :-

To verify that the login feature works correctly, securely, and allows only valid users to access their accounts.

Scope :-

In Scope

- Login using valid username/email and password
- Login using phone number
- Invalid login attempts
- Forgot Password link
- Remember Me (if available)
- Error messages
- Session management
- Logout after successful login

Out of Scope

User registration

Profile editing

Feed loading

Messaging

Notifications

Test Items :-

Login screen

Username/Email field

Password field

Login button

Forgot Password option

Session management

Features to be Tested:-

Successful login with valid credentials

Login failure with incorrect credentials

Empty username/password validation

Password masking

Account lock after multiple failed attempts

Session timeout

Logout functionality

Features Not to be Tested :-

Registration process

User profile updates

Photo uploads

Story creation

Search functionality

Test Deliverables :-

Test Plan Document

Test Cases

Test Data

Bug Reports

Test Execution Report

Test Summary Report

Responsible Roles

Role	Responsibility
Test Manager	Prepare test plan and monitor testing
QA Engineer	Design and execute test cases
Developer	Fix reported defects
Project Manager	Track project progress
Business Analyst	Validate business requirements

2. Create a mini test strategy document for the search functionality in a movie ticket booking app (like BookMyShow), specifying your approach to test levels (unit, integration, system), test types (functional, non-functional), and tools you would use. Mention at least one tool for each test level or type.

Ans.

Mini Test Strategy :- Search Functionality (BookMyShow)

Objective :-

Ensure that the search feature returns accurate, fast, and reliable movie results.

Test Levels:-

Unit Testing

Test individual search methods :-

Tool: JUnit (Java) or NUnit (.NET)

Integration Testing:-

- Verify communication between the search module and the movie database/API.
- Tool: Postman

System Testing:-

- Test the complete search flow from the UI.
- Tool: Selenium

Test Types :- Functional Testing

Verify search by movie name, language, city, and theater.

Tool: Selenium

Performance Testing :-

- Verify search response time under heavy load.
- Tool: Apache JMeter

Usability Testing :-

- Check whether search results are easy to understand and use.
- Tool: Manual Testing

Compatibility Testing

- Verify search works across different browsers and devices.
- Tool: BrowserS

3. List and explain three key differences between a test plan and a test strategy, using examples from any food delivery or e-commerce app you know.

Ans.

Differences Between Test Plan and Test Strategy :-

FACTORS	TEST PLAN	TEST STRATEGY
Scope & Specificity	It is defined at a particular project level.	It is defined at a company level, applying to multiple projects.
Granularity	It focuses on individual test cases and detailed testing activities.	It focuses on testing objectives, methods, and general guidelines.
Applicability	Applicable to a specific project	Applicable across multiple projects
Level of Detail	It provides in-depth details about the testing process.	It offers a higher-level view and does not go into details.
Purpose	It works like a roadmap for executing testing activities within a particular project.	It guides the overall approach testing approach.

Example :-

For Zomato :-

Test Plan:- Login, restaurant search, cart, and payment will be tested during this release.

Test Strategy:- Functional testing will use Selenium, API testing will use Postman, and performance testing will use JMeter.

4. Identify at least two risks, two assumptions, and two dependencies that could affect testing the payment feature in a shopping app (like Flipkart or Myntra).

Ans :-

Risks, Assumptions, and Dependencies :- Payment Feature (Flipkart)

Risks :-

1. Payment gateway server may become unavailable.
2. Slow network connection may cause transaction failures.

Assumptions :-

1. Payment gateway API is working correctly.
2. Test payment accounts are available.

Dependencies :-

1. Third-party payment gateway integration.
2. Bank/UPI service availability for successful transactions.

5. Given this scenario: Your team is planning to test the 'add to cart' feature in an online grocery app. Write a short paragraph describing how you would update the test plan if a new dependency (like a third-party coupon system) is introduced during the project. Focus on changes to scope, schedule, or deliverables.

Ans.

Updating the Test Plan for a New Third-Party Coupon System :-

If a third-party coupon system is introduced while testing the Add to Cart feature, the test plan should be updated to include coupon validation within the project scope. New test cases should verify that coupons are applied correctly, invalid coupons show appropriate error messages, and discounts are accurately reflected in the cart total. The testing schedule may need additional time for integration testing and regression testing. The test deliverables should also include new test cases, integration test reports, and defect reports related to the coupon system. Coordination with the third-party provider should be added as a project dependency to ensure the coupon service is available during testing
