

ASSIGNMENT 2

● SESSION 9

1. Pick any one feature from a popular app you use (for example, 'Add to Cart' in Flipkart or 'Send Message' in WhatsApp) and write 5 high-level test scenarios for it. List each scenario clearly.

ANS :-

Feature :- WhatsApp – Send Message

High-Level Test Scenarios :-

- Verify that a user can send a text message to an individual contact.
- Verify that a message is delivered when the recipient has an internet connection.
- Verify that the sender receives an error or pending status when there is no internet connection.
- Verify that the user can send emojis and special characters in a message.

2. For the 'Search Restaurant' feature in a Zomato-like app, write 10 specific test scenarios covering both functional and non-functional aspects. Think about different search inputs, filters, empty results, speed, and UI behavior.

Ans.

Test Scenarios :- Search Restaurant (Zomato-like App)

Functional Test Scenarios :-

- Verify that a restaurant can be searched using its exact name.
- Verify that searching with a partial restaurant name returns relevant results.
- Verify that search results are filtered correctly by cuisine.

- Verify that search results are filtered correctly by location.
- Verify that special characters or numbers entered in the search field are handled correctly.

Non-Functional Test Scenarios :-

- Verify that search results are displayed within 2–3 seconds under normal network conditions.
- Verify that the search functionality works correctly on different screen sizes and devices.

3. Choose one scenario from your Zomato 'Search Restaurant' scenarios and convert it into 5 detailed test cases. Each test case should include: Test Case ID, Steps, Test Data, Expected Result, and Actual Result (leave Actual Result blank).

Ans:

Test case ID.	Steps	Test data	Expected result	Actual result
TC_01	Open the app → Tap Search → Enter restaurant name → Tap Search	Domino's	Domino's restaurant appears in the search results.	IN QUE SAID TO BE BLANK.
TC_02	Open Search → Enter restaurant name in lowercase	Domino's	Relevant Domino's results are displayed regardless of letter case.	
TC_03	Open Search → Enter partial name	Domino's	Matching restaurants containing "Domino" are displayed.	

TC_04	Open Search → Enter restaurant name with leading/trailing spaces "	Domino's	Spaces are ignored and correct results are displayed.	
TC_05	Open Search → Enter exact restaurant name and apply Rating filter	Domino's	Only Domino's restaurants with rating 4+ are displayed.	

4.Download or create a simple test case template in Excel or Google Sheets. Fill it with 4 test cases for the 'Add to Playlist' feature in a Spotify-like app, using the columns: Test Case ID, Scenario, Steps, Test Data, Expected Result.

Ans.

TestID.	Scenario	Steps	Test data	Expected result
TC_01	Add song to existing playlist	Open song → Tap "Add to Playlist" → Select playlist	Song: Shape of You	Song is added to the selected playlist successfully.
TC_02	Create new playlist and add song	Open song → Add to Playlist → Create New Playlist → Save	Playlist: Workout Mix	New playlist is created and the song is added.

TC_03	Add same song twice	Add song to playlist → Repeat add action	Song already exists	App prevents duplicate entry or notifies the user appropriately
TC_04	Add song without internet	Disable internet → Add song to playlist	Song: Believer	User receives an appropriate network error message or the action is queued if supported.

5. Write a basic test script (in plain English, not code) for the 'Login with OTP' feature in a Paytm-style app, describing the exact steps a tester would follow to manually test the OTP flow from start to finish. Include both valid and invalid OTP scenarios in your script.

Ans :-

Manual Test Script :- Login with OTP (Paytm-style App)

Test Script :- Login with OTP

Objective :- Verify that users can log in using a valid OTP and that invalid OTPs are handled correctly.

Steps :-

- Launch the application.
- Verify that the login screen is displayed.
- Enter a valid registered mobile number.
- Tap the Get OTP button..

- Verify that the user is successfully logged in and redirected to the home screen.

Invalid OTP Scenario :-

- Log out of the application.
- Repeat steps 1–4.
- Enter an incorrect OTP (for example: 123456).
- Tap the Verify/Login button.
- Verify that an error message such as "Invalid OTP" is displayed.
- Tap Verify/Login.
- Verify that the user is successfully logged in.

Expected Results :-

- A valid OTP logs the user in successfully.
- An invalid OTP displays an appropriate error message and prevents login.
