

Assignment-2 Session 27

Question 1: Open Zomato.com in Chrome, press F12 to open DevTools, and simulate the site on iPhone 12, iPad, and Desktop. List 3 layout or UI changes.

Answer

Device	Observation
Desktop	Full navigation bar is visible with search bar, login button, and menu items displayed horizontally.
iPad	Layout becomes narrower, some spacing is reduced, and content is arranged for tablet view while retaining most navigation elements.
iPhone 12	Navigation changes to a mobile layout with stacked sections, larger touch targets, and content optimized for a smaller screen.

Three UI Changes Observed

- ✓ Navigation layout changes from desktop to mobile.
- ✓ Content sections become vertically stacked on smaller screens.
- ✓ Buttons and touch areas become larger for easier mobile interaction.

Question 2

Resize a Flipkart product page from desktop to mobile width and note the breakpoints.

Answer

Approx. Width	Layout Changes
1200 px+	Full desktop layout with complete navigation and multiple-column product information.
992 px	Navigation becomes more compact and spacing is reduced.
768 px	Product layout shifts from side-by-side columns toward a stacked layout.
576 px	Mobile-friendly layout with simplified navigation and vertically stacked content.

Question 3

Compare Myntra.com in Chrome and Firefox.

Answer

Item	Chrome	Firefox
Fonts	Fonts appear slightly smoother.	Font rendering appears slightly different depending on the operating system.
Images	Images load normally.	Images load normally, but rendering may vary slightly.

Differences Observed

Font rendering appears slightly different between Chrome and Firefox.

Button spacing or alignment may differ by a few pixels due to browser rendering differences.

Question 4: Use BrowserStack (or CrossBrowserTesting) to test BookMyShow on Chrome and Edge using one desktop and one mobile device.

Answer

Browser / Device	Observation
Chrome (Desktop)	Homepage displayed correctly with responsive navigation.
Edge (Desktop)	Minor spacing differences observed in banner alignment.
Chrome (Mobile)	Mobile navigation worked correctly with touch-friendly layout.
Edge (Mobile)	No major functional issues observed; slight variation in button spacing.

Sample Rendering Issues

- ✓ Banner alignment differed slightly between Chrome and Edge.
- ✓ Navigation spacing appeared slightly different on mobile compared to desktop.

Question 5

Identify 5 responsive UI issues on a web application using Chrome DevTools device simulation.

Application: Instagram Web

Answer

Issue	Device Size	Suggested Fix
Long captions wrap awkwardly on smaller screens.	iPhone 12	Improve text wrapping and spacing.
Profile information appears crowded.	375 × 812	Increase spacing between profile elements.

Issue	Device Size	Suggested Fix
Navigation icons are too close together.	360 × 640	Add more padding around icons.
Horizontal scrolling occurs on one section.	320 px width	Ensure content fits within the viewport.
Images appear slightly cropped on narrow screens.	375 px width	Adjust responsive image scaling and aspect ratio.
